

EUGENE SUBRADO JR

Software Development Engineer

ABOUT ME

A professional software engineer with about ten (10) years of experience in developing quality, robust, and optimized web pages. Knowledgeable in various platforms such as **JavaScript, jQuery, Tailwind CSS, Flask(Python), Node.js (Express),** and **React (Next.js /Native Expo).** Contributed, maintained and completed client-focused projects for pharmaceutical and automotive eCommerce companies. Dependable, self-starting, and solutions-oriented with a strong commitment to team goals and client satisfaction.

ACADEMIC HISTORY

Silliman University, Philippines
Bachelor of Science in Computer Engineering
Completed SY 2002 - 2007

PROFESSIONAL EXPERIENCE

Maks Enterprises

Dec 2025 - May 2026 (Project Manager / Full Stack Dev / Contract)

These are my contributions during my tenure:

- Oversee and deployed three projects for Q1 out of nine planned ERP features for 2026. The following are (1) Automatic Charging reminders, (2) Redesign Inventory Management and (3) Automatic label generation on order placement.
- Improve Wordpress eCommerce site performance (Insight) from 20% to 80%, by planning and helping facilitate refactoring activities, plugin removal and reduced LCP and render blocking CSS and Scripts.
- Introduced an AI-assisted agent extension in VS Code for code review, optimization, and error detection, increasing average sprint delivery from 25 to 60 story points while improving planning and testing capacity.

Xtensa Inc. (Quartica)

August 2015 – June 2023 (As a Software Engineer)

July 2023 - July 2025 (Senior Software Engineer)

Primary responsibilities included developing and maintaining web applications and pages for clients in the pharmaceutical and chemical industry. These are the key contributions I completed:

- Built and optimized core front-end pages, functionalities and API integrations for requested modules under MARS app that supports over 4000 users. Helped and coded parts of RBAC permission feature, OAuth 2.0 for MFA login, dashboards and workflows across the app.
- Converted approximately 70% of the MARS application from jQuery to React, improving state management, error handling, and data flow across the application.
- Developed and maintained SharePoint-based web applications, including list aggregator tools, user upskilling and scheduling app. Spearheaded the upgrade of Sharepoint platform (2010 to 2016) and its supporting libraries such as jQuery and Kendo UI.
- Led knowledge transfer and mentoring initiatives for junior developers, providing guidance on development methodologies, tools, optimization techniques, and best practices for handling work-related challenges and team collaboration.

Qualfon Philippines Inc

October 2014 – July 2015 (part of Customer Retention Team)

Skills I obtained during my tenure:

- Delivered technical support and troubleshooting for telecommunications services, developing analytical, communication, and customer-focused problem-solving skills

Silliman University

June 2013 – May 2014 (as an IT Internal Auditor)

During my time here, I attained the following skills:

- Analyzed IT infrastructure, backup systems, and database records using SQL to identify risks, validate data accuracy, and recommend process improvements. (Use COBIT as a standard)
- Prepared technical documentation and presented findings to stakeholders, strengthening analytical and problem-solving skills.

CERTIFICATES

ISC2: Certified in Cybersecurity Certification, August 2024 (Candidate Only)

ID: 92871cdd-3549-4495-85d1-ca2f0358854, until August 2027

Coursera: Meta Front-End Professional (React Based) Certificate, June 2024

<https://coursera.org/verify/professional-cert/VTX3V5JYCBSB>

PORTFOLIO PROJECT

Simple Billing PDF Converter

Link: <https://simplebilling.onrender.com>

A data conversion tool used to import or extract data from a PDF file and copy it to a database or simplify it. Its built using Next.js front end and Flask in backend.

Real-Time Event Analytics Dashboard

Link: <https://edgeanalytics-client.onrender.com>

A dashboard that updates in real time when new event is added to the database. Project is based in MERN Pattern (React V19) and used libraries like tailwind, Material UI, socket IO and Node.js type server support
